

SHARED MOBILITY 2030 Action Agenda

We're at a pivotal moment for the future of equitable and accessible transportation.

The climate crisis and persistent social, economic, and racial inequality are shaped in no small part by how our roads and streets are designed to prioritize cars over people.

We need more options. We need healthier, more affordable communities and mobility systems that are built around people, not cars. Now is the time to take action.

That's why we're inviting all stakeholders to take part in the **Shared Mobility 2030 Action Agenda** that will make equitable, clean, shared mobility more convenient, more practical, more available, more accessible and more affordable than owning or driving a car.

By reducing our need to own and drive (and park) our private cars, shared mobility can help make our planet healthier, our communities more equitable, and households more prosperous.

This is an opportunity to be at the starting line of a critical movement that will redefine what it means to move freely.

SHARED MOBILITY IS THE SOLUTION.

By giving us more ways to get around, shared mobility can make our streets safer and connect more people to more opportunities more affordably and sustainably.

The **Shared Mobility 2030 Action Agenda** supports all shared transportation options, including everything from public transportation to ride-hail, from car-sharing to on-demand responsive microtransit, from shared bikes and scooters to paratransit.

Shared mobility also includes the infrastructure of safe sidewalks, protected bike lanes, complete streets, and shared mobility hubs as well as the digital and information systems we use to find, access, and use these shared services.

MOVING TOGETHER TO MAKE SHARED MOBILITY THE FIRST AND BEST OPTION.

The public, private, and non-profit organizations that join the Action Network hold themselves accountable for advancing the Shared Mobility Action Agenda to help:

- **Households and families** save money by reducing the amount of effort and expense they need to spend on transportation.
- **Governments** to make shared mobility a key pillar of local, state, and federal strategies for decarbonizing the transportation sector and addressing social, economic, and racial inequity.
- **Mobility companies** and other private sector players commit, as a shared mobility sector, to address the climate crisis and persistent social, economic, and racial inequality.
- **Nonprofits and advocacy** groups to convey community needs and desires, drive the climate change and equity agenda, and hold the public and private sectors accountable through clear goals on decarbonization and equity.
